Providing solutions for environmental and personal safety

For more than 30 years, Pratt Safety Systems has provided Australian workplaces with innovative solutions for occupational health, safety and environmental issues.

These include the storage, handling and disposal of solvents, fuels, alcohols and other flammable liquids, utilizing Pratt safety cabinets, grounding wire assemblies, drum faucets & pressure/vacuum vents, and specialist storage, dispensing and disposal containers. Pratt also offers Australian Standards compliant storage cabinets for acids, caustics, toxic substances and other classes of dangerous goods found in the workplace.

The Pratt range of safety showers and eyewash units, both plumbed and self-contained, is the industry standard for instant and effective first aid treatment in the event of chemical splash, exposure to toxic gas, or burns from flames, electricity and other energy sources.

Pratt safety signs are available in a wide range, designed around AS1319 "safety signs for the occupational environment". This includes mandatory (hearing protection), prohibition (no smoking), danger (high voltage), warning (forklifts in use), emergency (first aid), and fire equipment (fire extinguisher) as well as Hazchem signs, road & traffic and many other categories relating to identification of workplace safety issues.

Now, Pratt is proud to introduce to Australia a great range of spill containment, spill response and facility protection products from UltraTech International. The award-winning UltraTech range offers cost-effective solutions for hazardous spill risks and facility protection issues.
